# RATCHET WRENCHES

## 195-F KWIK-TITE™ RATCHET WRENCHES

For 5/16" to 2-1/4" O.D. tubing and 7 mm to 32 mm hex sizes.

The Kwik-Tite™ ratchet wrench speeds installation of tube fittings and valves, hex nuts, bolts and fasteners. This unique wrench, with its open jaw design, makes it easy to slip onto fittings and fasteners, even in tight quarters. Flips quickly into tightening position with a sure grip on all hex surfaces.

12-point contact distributes torque pressures evenly on the flats of the hex, not at the corners. Eliminates warping and distorting of fittings and fasteners. Because of the Kwik-Tite™ ratchet action, tightening jobs are easier and faster.

Kwik-Tite™ wrenches are constructed for rugged use. Jaws are hardened steel. Handles are made of heavy gauge alloy steel, hardened and with a black oxide finish.

Ratcheting of wrench requires only 30° of movement.

# SERVICE MANIFOLDS

## 700 SERIES KWIK-CHARGER™ MANIFOLD

Charging the system is faster and easier than ever. Imperial® has designed manifolds with built-in Kwik-Charge™.

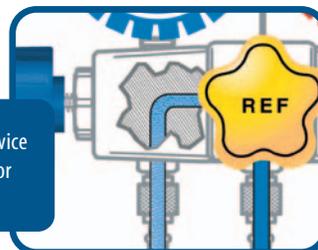

- **Dual Action Valve** - Operates as a conventional manifold, or engage the Kwik-Charge valve and the manifold accepts liquid refrigerant from cylinder and discharges into the low side of the system. Charging rate is up to eight times faster than vapor charging.
- **Safe** - Internal metering element reduces liquid flow to a level below capacity of the compressor. Assures a safe, fast charge without endangering the compressor.
- **All-In-One** - No connecting or disconnecting special adapters for charging new blended refrigerants.
- **No Pressure Drop-In Cylinder** - No need to heat refrigerant cylinder.
- **Works With All Refrigerants** - CFC, HFC, HCFC, Zeotropic and Azeotropic.
- **Filters In All Manifold Port Fittings** - To keep out particulate material that may be present during recovery or reclaim or in recovered refrigerant. Filters are easily serviceable.
- **Deep Vacuum Valve Design** - Proven diaphragm-type, soft-seat valves require only fingertip pressure to close completely. One turn to full open/close. Superior for deep vacuum service.
- **Precision Gauges & Protective Boots** - Unique gauges provide superior resistance to shock, vibration & pulsation for accurate performance and extended gauge life.
- **PolarShield™ Hi-Performance Hoses** - 800 PSI working pressure, 4,000 PSI burst pressure - not all models include hose.
- **Ergonomic Handles** - Durable, soft-touch non-slip surface, even with oily fingers.
- **Swivel Hanger**

# KWIK-COUPLERS™

## KWIK-COUPLER™ - SERVICES HOSE SHUT-OFF

The Kwik-Coupler™ set is intended for use with refrigeration and air-conditioning service hoses when connecting to core valve type access fittings. Conventional threaded connecting is converted to push-pull operation which is faster, easier and positive sealing at all times. Valve cores are depressed automatically without adjustments or loss of refrigerant. Disconnecting is also accomplished without loss of refrigerant.

An automatic shut-off valve retains refrigerant pressure in a disconnected hose. This feature permits transferring high side hose refrigerant through the service manifold into the low side, thereby eliminating waste and hazardous high pressure discharge and atmospheric damage.

### FEATURES

- Automatic full depression of core valves without adjustment, regardless of core position.
- Coupler halves separately connect to access fitting and hose end, then easy push/pull operation automatically opens or closes system without loss of refrigerant.
- Automatic shut-off of hose ends permits discharging high side hose through manifold into low side.
- Eliminates hazardous discharge of refrigerant and oil from system when disconnecting hose.
- Simplifies operation of charging critical amount of refrigerant into small systems.
- Prevents finger burn when disconnecting - especially servicing heat pumps in cold weather.
- Core depressors in hose ends no longer necessary - speeds servicing of systems with hand valves.

**16-C** Straight Coupler (45° Flare) 1/4" female x 1/4" male.

**17-C** 90° Elbow Coupler (45° Flare) 1/4" female x 1/4" male.

**18-C** (Set) includes 16-C and 17-C.

**26-C** Straight Coupler (45° Flare) 5/16" female x 5/16" male.

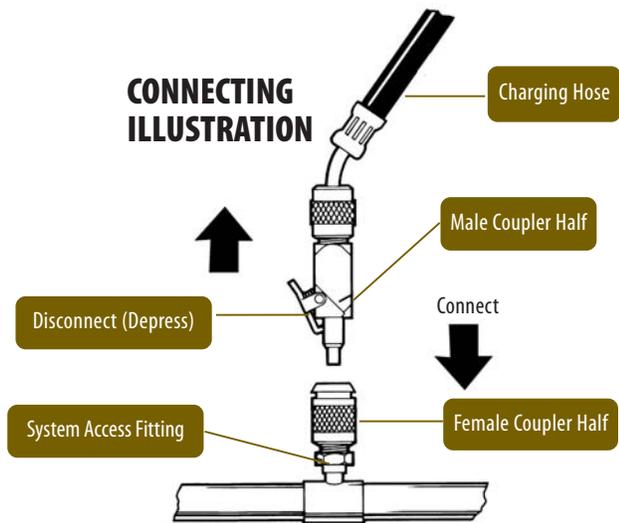

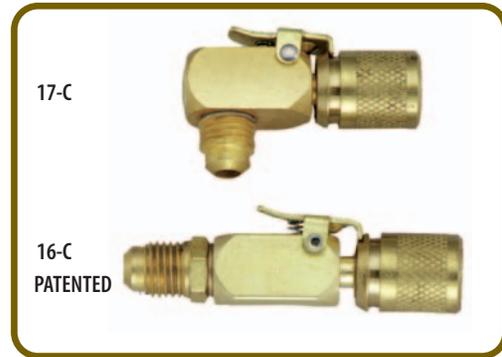

**27-C** 90° Elbow Coupler (45° Flare) 5/16" female x 5/16" male.

26-C and 27-C NOT UL APPROVED

## AUTOMOTIVE KWIK-COUPLER™ FOR R-12

**19-C** (Set) Same as 18-C except with special female coupler for use on 3/16" high side automotive access valves.

**20-A** High side adapter. Converts 3/16" system access valve to 1/4" access valve for use with standard 1/4" charging hose.

**WARNING:** Do not allow any refrigerant cylinder, connected for charging, to be exposed to system high side pressure cylinder - explosion could result!

## 23-C & 24-C SHUT-OFF COUPLERS

- Coupler captures refrigerant within hose, eliminating refrigerant loss, atmospheric damage, and finger burns.
- Connects quickly & easily to any standard 1/4" SAE refrigerant hose.
- Solid brass construction for years of dependable service.
- Innovative modular design permits easy field repairs.

# KWIK-COUPERS™

## KWIK-COUPLER™ REPAIR KITS

The Kwik-Coupler repair kit is intended for use with Imperial's 16-C, 17-C, 18-C and 19-C Kwik-Couplers and PolarShield™ KC-Series hose. The male repair kit includes a threaded hex sleeve for replacement on straight coupler assemblies.

### KCK-M Male Kwik-Coupler Repair Kit

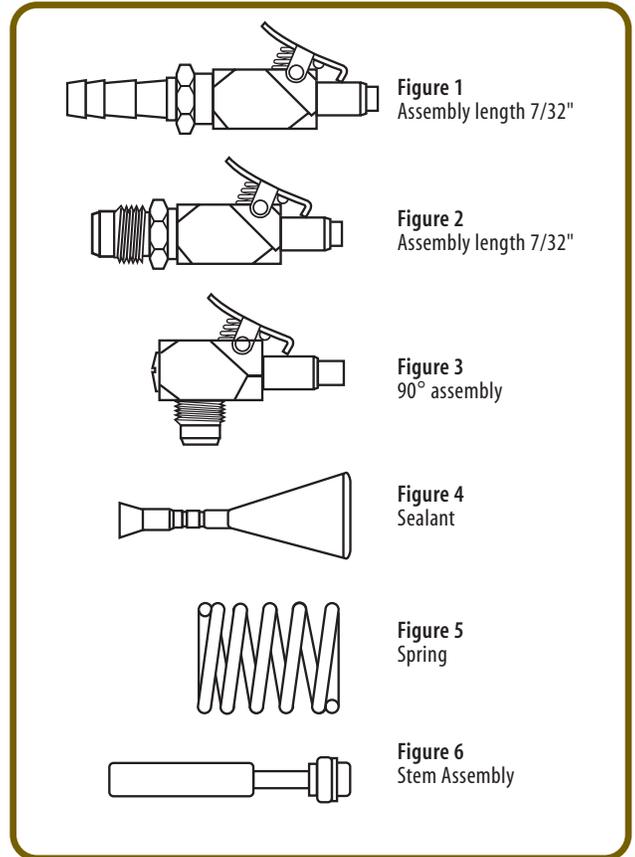

#### REPAIR INSTRUCTIONS

1. Remove threaded sleeve on end of Kwik-Coupler. A vise may be necessary to remove old straight sleeve - the 90° has a screwdriver slot on back for removal.
2. Discard old stem and spring.
3. Use a wire brush to clean sealant residue from disassembled parts.
4. Insert new stem and spring.
5. Apply one bead of thread sealant completely around the thread. Do not apply an excessive amount of sealant - this may damage o-ring seal and cause leakage. Assemble to length at right (Fig. 1 & 2). For 90° style, engage threads until the bottom of the slot is even with the back of the coupler (Fig. 3).
6. Allow sealant to cure at least 30 minutes. The Kwik-Coupler is now ready to use.

### KCK-F Female Kwik-Coupler Repair Kit

#### REPAIR INSTRUCTIONS

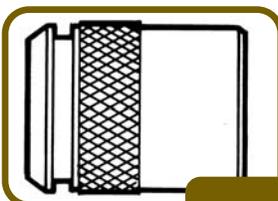

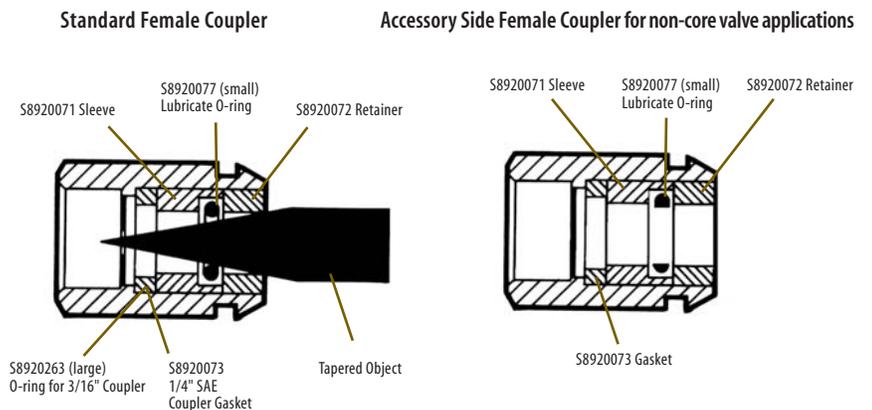

1. Insert tapered object (pen or pencil) and press against threaded retainer. Unscrew and remove retainer sleeve and rubber seals.
2. Lubricate new seals and reassemble. Tighten retainer to zero clearance plus 1/8" turn. Kwik-Coupler is now ready for use.

- Capacity: 1/4" thru 1/2" O.D.refrigerant copper tubing.
- Durable: made with high-carbon, heat treated steel jaws.
- Works with all refrigerants CFC, HFC, HCFC and Zeotropic, Azeotropic.
- 90° elbow valve eliminates tangling and interference problems.

PATENTED PT-109

## KWIK-CHARGE™

### Liquid low side charger provides fast, safe charge essential when using tracing dye.

Kwik-Charge accepts liquid refrigerant from the cylinder and discharges into low side of the system. Charging rate is up to eight times faster than vapor charging. In addition, liquid charging is required when using R-410A and other blended refrigerants. Kwik-Charge is attached to the low side of the charging manifold. Charging hose is connected from Kwik-Charge outlet to low side of refrigeration system. Internal Kwik-Charge metering element reduces liquid flow to a level below capacity of compressor. This assures a safe, fast charge without endangering the compressor. A built-in ball check valve automatically opens when drawing a vacuum to assure rapid, unrestricted evacuation. Can be used with all fluorinated hydrocarbon refrigerant systems.

#### Features

- Up to 8 times faster than vapor charging.
- No need to heat refrigerant cylinder.
- Built-in check valve opens for drawing unrestricted vacuum.
- No pressure drop in cylinder.
- One charger services all units 1/2 ton or larger.

535-C

**535-C** Kwik-Charge 1/4" female SAE flare inlet, 1/4" male SAE flare outlet.

**545-C** Kwik-Charge 5/16" female SAE flare inlet, 5/16" male SAE flare outlet.

#### CONNECTION TO MANIFOLDS (connect all hoses as usual)

**2-Valve** Connect Kwik-Charge™ to low side fitting. Arrow downward.

Kwik-Charge™ can be connected to refrigerant cylinder rather than manifold.

**4-Valve** Unscrew Kwik-Charge™ end fitting & reverse, then connect to refrigerant fitting as shown (flow arrow on body points upward).

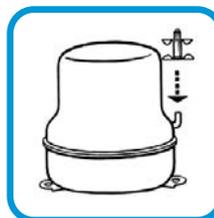

## PROCESS TUBE ADAPTER FOR CHARGING & TESTING

Offers a convenient method of making a service connection to a hermetic unit. Also ideal for providing a connection in testing coils and tubing installations. Handles pressure to 100 PSI.

To connect to a hermetic system, pinch-off tube is cut off and adapter is slipped over cut end of tube and tightened. Synthetic rubber seal of adapter grips and seals outside of tube. This gives a 1/4" SAE male flare connection to the system for evacuating, charging or testing.

After system is recharged, tube is pinched off next to adapter. Adapter is then removed and tube is cut off and sealed with solder. Adapter can be reused repeatedly.

# PIERCING VALVES & ADAPTERS

## 3-IN-1 PIERCING VALVE

Fast, easy, secure installation. Provides access to line at any point for charging, testing or evacuation. Two valves cover 3/16" to 5/8" O.D. tubing. Has depressor valve and needle valve shut-off.

Valve clamps on tubing line with two captive slotted-head screws: positive built-in mechanical stop for each tube size eliminates tightening guesswork. To pierce tube, thread down the combination 1/4" flare port, stem and needle using knob furnished or a suitable wrench, back off stem and connect depressor-type hose for testing or charging. After service is completed valve is closed and left on line for future service. Dust cap provided.

Three-point sealing [in Fig. 1: (1) needle-type valve, (2) gasket and (3) checkvalve] prevents leakage. Neoprene seal withstands temperatures near 300° F.

**541-C** Fits 3/16", 1/4" and 5/16" O.D. tubing.

**542-C** Fits 3/8", 1/2" and 5/8" O.D. tubing.

### FITS THREE SIZES

## TAP-A-LINE™

### Universal Line Piercing Valves

A quick and economical way to tap into a line at any point for charging, testing or evacuating hermetically sealed units. Valve fits 3/16" to 3/8" O.D. tubing and has 1/4" flare connections for charging lines. Valve clamps on tubing line, one end of charging line is attached to 1/4" flare connection on valve and other end to testing unit or refrigerant tank. Valve stem is turned forward until sharp needle pierces tubing. Stem is then backed off for testing or charging. After service is completed, valve is closed and left on line for future service. Valve has T-Grip handle and forged brass body. Sealing gasket is confined to prevent falling out. V-block centers valve on tube, and is attached to nut so that it can't be lost.

# MILBAR WIRE TWISTERS

Milbar is the world's leading brand of Wire Twister Tools and Kits. Designed for the professional mechanic, Milbar forgings are made from high carbon alloy steel and are controlled throughout the manufacturing process to exacting engineering specifications. Each tool passes a series of rigorous quality assurance tests which ensure function and reliability under the most demanding environments.

## TYPES AND STYLES

Wire Twisters come in three nominal sizes: 6", 9" and 12". Diagonal (standard) or Tapered nose configurations are provided to complement specific applications and user preference. Some models incorporate a Cushion Throat to catch clipped wire ends, preventing FOD (foreign object damage). The Spring Return feature automatically retracts the twist rod to ease and speed the work. Finally, Wire Twisters may produce right-hand twists (clockwise action), left-hand twists or both (reversible action). **All are available from Milbar.**

**NEW & IMPROVED!**  
All Milbar Wire Twisters now have a durable black oxide finish for improved corrosion resistance.

# REVERSIBLE WIRE TWISTERS

- Reversible action for left and right twists.
- Automatic spring return.
- Faster with better control.
- 6" and 9" models available with cushion throat to hold clipped wire – **no Foreign Object Damage (FOD)**.

## SAFETY WIRE INSTALLATION HIGHLIGHTS, DOUBLE TWIST METHOD:

(AEROSPACE STANDARD AS567)

1. The safety wire is installed so that, if the fastener has any tendency to loosen, it will cause the safety wire to tighten.
2. The maximum span of safety wire (between tension points) shall be 6" (152 mm).
3. The maximum length of safety wire to be used in a single application is 24" (609 mm).
4. The number of twists per inch (1 twist = 1/2 complete turn) depends upon wire diameter: 0.020" to 0.025" dia., 8-14 twists; 0.032" to 0.041" dia., 6-11 twists; 0.051" to 0.060" dia., 4-9 twists.
5. The wire which is looped around the outside of the fastener must always be routed UNDER the wire protruding from the hole (so that the loop will stay down and not cause slack). This often requires the direction of the wrap and twist of strands to REVERSE from run to run, or run to pigtail.
6. Pigtail should be no more than 3/4" long and have a minimum of four (4) twists. Ends should be cut and bent toward fastener to prevent snags.
